

ReGen: Why Hybrid Cloud?

Superior Business Continuity

A hybrid cloud solution safeguards business continuity for Small and Medium businesses (SMB) in two important ways:

1. It ensures that all data, applications and server images are safely stored offsite. Local backups aren't much good in the event of a building fire or extreme local weather. With a hybrid solution, those contingencies won't threaten an SMB—because everything of business value is safely ensconced in multiple locations: on-prem and in remote cloud data centers.
2. It allows data, applications and server images to be accessed from any failover location. Business continuity isn't just about storing backups. It's about spinning up failover systems as quickly as possible. With some hybrid cloud backups, those failover systems can start running instantly on on-prem hardware if the problem is just a device failure. But what sets the best business continuity solutions apart is when a real disaster strikes. A complete hybrid cloud solution allows an SMB to run its critical applications off virtual machines in the cloud—which users can access from branch offices, home PCs, laptops or any other authorized systems—until such time as normal IT operations can be restored.

Not all solutions do this (some simply offer cloud backup), and in fact, some may charge extra for cloud failover. For the fastest failover time, you'll want a solution which saves each backup in a ready-to-restore VMDK file format that requires no time consuming conversions at the time of restore. Bottom line: Hybrid cloud backup is ideal for SMBs that want to fully safeguard their business data.

ABOUT REGEN

ReGenerating Solutions (Regen) has been providing technology solutions and services since 1983. ReGen is dedicated to offering quality technology solutions including Hardware and Network Design, Data Backup and Recovery, Dark Web Monitoring, Phishing Simulation Training, Phone systems as well as HelpDesk services.
